

To whom it may concern,

I am excited to be applying for a Junior Data Scientist position at Access Finance AD. I believe my skills and experience make me the perfect candidate for this position.

I have a master's degree in Economics. I graduated from a top university, where I realized I was interested in Algebra, Functions, Modeling, Geometry, Statistics and Probability, but I didn't decide to dedicate my time to studying Data Science at that time, because I was also interested in Sales and Marketing.

I worked as a Marketing Specialist and Sales Representative for a few companies where I kept focusing on data. Afterwards I decided to have a business of my own. It wasn't as successful as I wanted it to be and that's also when Covid19 was first reported. I decided to sell my business and the moment came for me to learn a lot more about data. I accepted a part-time job as an English teacher and in most of my free time I have been learning Data Science. I have experience working with a variety of datasets, such as FIFA dataset, American football dataset, weather dataset, Netflix dataset, Nobel prize winners dataset, Airbnb dataset and more.

I have also done some projects such as: "Investigating Netflix movies", where I visualized the data using a matplotlib plot which showed that movies are getting shorter (according to the dataset which I was given), "Predicting credit card approvals", where I built an automatic card approval predictor using machine learning (finding the best performing model) and more.

I am excited to learn more about the Data Science field and to use my skills to help Access Finance AD achieve its goals.

I consider myself a responsible and self-motivated person with a lot of experience and an excellent level of both English and Spanish language. I am a hard worker and a team player. I am excited to learn from the experienced data scientists at Access Finance AD and to contribute my own skills and ideas to the team.

Thank you for your time and consideration.

I look forward to hearing from you soon.

Sincerely,

Martin Stankov
